PC DHEA Topical

DeHydroEpiAndrosterone (DHEA) is the most abundant steroid hormone that is naturally produced by the adrenal glands, the gonads, as well as the brain. The body converts DHEA into male and female sex hormones. Because DHEA levels begin to decline by the time most people hit their mid 20's, there is strong speculation that DHEA has a direct role in aging. Additionally, low levels of DHEA have been detected in people with Type II Diabetes, breast cancer, heart disease, osteoporosis, as well as kidney disease.

PC DHEA Topical is a very absorbable, easy way to deliver and increase levels of DHEA. Each pump delivers 15mg of natural DHEA. Apply to soles of the feet to increase DHEA levels, as this is the location on the body with the largest pore size and will facilitate greater absorption. For aesthetic uses, such as age spots on the dermis, apply anywhere they exist.

PC DHEA Topical Benefits

- Natural source of DHEA
- Potentially increase levels of DHEA
- Easy delivery
- 15mg DHEA per pump
